This report was compiled and prepared by G. Alan Harrison
with the assistance of the Inspection, Laboratory, and Administrative Staffs.

Introduction

Kentucky's commercial feed law (KRS 250.491-250.631) dates from 1906 and was revised in 1996. This feed law provides protection for the state's livestock, poultry, and pet owners by regulating all feed materials offered for sale or for mixing into a feed. Products falling under regulation include all types of pet foods, livestock minerals, complete animal and poultry feeds, protein or mineral blocks, supplements, feed ingredients, specialty materials such as drug premixes, vitamin and mineral supplements, liquid feeds, pet supplements, pet treats, and other specialized pet foods. The law does provide for exemptions for whole and unprocessed grain, raw meat, hay, straw, stover, silage, cobs, husks, and hulls when not processed.

Revisions in laws and regulations have added additional requirements over the years. These revisions are primarily in response to more varied livestock feeding practices, changes in feed manufacturing technology, and an increased number of feed ingredients. These revisions ensure safe and effective use of drugs and authority to inspect mills for compliance with good manufacturing practices. Any drug and feed additive use must conform to Food and Drug Administration (FDA) regulations. A major aspect is to prevent unsafe residues in human food that may result from misused or contaminated feed. Several provisions are aimed at keeping poisonous and deleterious substances from being distributed in feeds.

Information in this report is intended to inform the feed purchaser, provide a basis for fair and equitable competition, and assist in assuring the safety of animal and human food.

Feed Mill Inspections

Maintaining high quality and safe feeds for animals requires a comprehensive inspection program. Inspection is particularly important when mills manufacture medicated feed. Mills may be required to obtain a license from FDA to manufacture medicated feed depending on the type and concentration of drug. All feed mills must comply with good manufacturing practices, which are assessed as part of a comprehensive inspection program. The purpose of these inspections is to ensure that several safe feed practices are followed: (1) approved drug levels are used, (2) proper mixing procedures are followed, (3) feed ingredients are monitored, (4) good record keeping is followed, (5) good housekeeping protocols are followed, and (6) a recall plan is in place.

BSE Rule Inspection

The Division participates in an inspection program in partnership with FDA that conducts 79 inspections of feed dealers and manufacturers each year. These inspections assure that mills are following FDA guidelines and are in compliance with rules prohibiting the use of ruminant proteins in feeds intended for other ruminant animals. These rules are in place to prevent the establishment and amplification of bovine spongiform encephalopathy (BSE). Feed mills receiving prohibited animal protein materials must follow adequate procedures to prevent any chance of those materials getting into feeds for ruminants.

Food Safety

Food (feed) safety has moved to the forefront of public concern. Animal food that is free of contaminants is an all important concern of feed manufacturers and regulatory officials due to potential impacts any type of contamination would have on the Kentucky livestock industry, and thus human food. Feed industry

personnel have become more involved with ingredient assessment and monitoring, defining ingredient storage conditions, maintaining clean storage and manufacturing facilities, increasing record keeping, and having plans in place to remove contaminated feed from distribution in case of an emergency situation.

Occurrences with animal or pet food that need attention may include abnormal feed color or odor, presence of a foreign material, animals refusing the feed, and sickness or death of animals. An investigation is warranted when any of these occur. Regulatory Services works in conjunction with the University of Kentucky Veterinary Diagnostic Laboratory, extension agents, local veterinarians, feed dealers, and feed manufacturers and take samples of feed when these incidences occur. Our continued emphasis on frequent inspections, regular sampling, laboratory analysis, label reviews, and inspections support efforts to maintain food safety and minimize any adverse impact.

Feed Registration and Labeling

Manufacturers are required to register all feeds before distribution to ensure that correct label information is provided to the purchaser. Each year, we conduct more than 7,000 label reviews for products for animals or pets. Guaranteed analysis, ingredient listings, and feeding directions for the intended animals or pets are scrutinized. Particular attention is given to medicated feed labels with regard to approved drug usage and dosage, statement of drug purpose, and any required warning, caution, or special feeding instructions. Misleading and unsubstantiated information or claims are prohibited. More than 18,500 different commercial feeds and pet foods are currently registered for distribution by over 1,200 companies. There are approximately 230 facilities lo-

cated in Kentucky that serve the feed and pet food industry with complete feeds or feed ingredients, or that distribute their own private label products.

A feed label is the fundamental communication with the consumer; it provides purpose of the feed, directions for use, nutrient information, ingredient content, and special comments or warnings. Providing labeling assistance and guidance to product registrants and manufacturers has been beneficial in attaining high quality feeds and promoting food safety. A full-time registration specialist reviews product labels for compliance with applicable laws and regulations. The field inspectors assist manufacturers with labeling, resulting in more uniform and informative labels. In addition, spreadsheets are available to assist in establishing label guarantees and for estimating nutritional suitability of custom mixed feeds and even pet treats. These services strengthen an excellent working relationship with the feed industry in Kentucky.

Financial Support

The feed regulatory program is supported by inspection fees of the commercial feeds sold in Kentucky, registration fees for small package items, and General Assembly appropriated funds. An inspection fee of 35 cents per ton is paid on commercial feeds in packages of larger than 10 pounds. Distiller's wet grains, other distillers products of more than 75 percent moisture, whey, and brewers wet grains distributed without further processing pay a fee of 5 cents per ton. Products sold exclusively in packages of 10 pounds or less pay an annual registration fee of \$50 per product. In 2014, the feed program collected a total of \$1,232,316 in inspection fees, registration fees, and late payment penalties.

Inspection and Sampling

Tables 1, 2 and 3 list the number of official samples obtained by field inspectors of feed ingredients, complete feeds and supplements/premixes, and specialty feeds, respectively, the past five years. Pet foods made up more than one third of the samples collected in 2014. The majority of these samples were complete foods for dogs and cats. With more pet treats in distribution in Kentucky, inspectors are also sampling more of these products.

In addition to the official samples reported, our lab also analyzed an additional 50 unofficial samples. The samples include ingredients and products submitted to our lab by county extension agents, the UK Veterinary Diagnostic Laboratory, livestock producers, and consumers.

Table 1. Number of feed ingredients sampled.

Type	2014	2013	2012	2011	2010

Analysis and Product Suitability

Analysis of nutrients and other components in feed samples taken by field inspectors are provided by the feed laboratory. The laboratory data is used to evaluate suitability of product labeling, feed quality, and absence of any contaminants or deleterious substances. Table 4 reports the number of various feed analyses conducted on samples during 2014.

Tonnage Distribution

Table 5 summarizes the tons of ingredients distributed during the last three years. The term “exempt” represents ingredients sold to other feed manufacturers in Kentucky who pay the inspection fees. “Non-exempt” represents ingredients in which the reporting firm pays the inspection fee. Table 6 reports the tons of complete feeds and supplements/premixes distributed during the last three years.

Table 5. Reported tons of ingredients distributed.

Ingredient	Exempt			Non-Exempt		
	2014	2013	2012	2014	2013	2012

Analytical Variations

Regulatory officials use analytical variations (AVs) as a guide for issuing any type of violation of the label guarantee. The total variation surrounding an analytical analysis of a feed product and comparing it to a label consists of (1) variation associated with the formulation and mixing in producing a feed, (2) variation of particle sizes in feed ingredients, (3) potential ingredient settling during transport, (4) variation associated with sampling, (5) variation associated with mixing and grinding samples, and (6) variation during analysis in the laboratory. Most variations associated with sampling, mixing, grinding, and analysis in the laboratory are known as a result of many years of study to arrive at official methods. The AVs listed below allow for the inherent variability in sources that follow the official methods, with more weight given to the areas of analytical variation. The laboratory reported value of an ana-

lyte in a sample is reviewed with respect to the guarantee using the AVs below as a guide.

Note that the AVs listed for minerals do not apply to cat and dog complete foods formulated to meet AAFCO requirements. These complete pet foods must meet AAFCO pet food profiles. All profiles have minimum mineral requirements and some have maximums as well. In this situation, the tolerances are national standards set by AAFCO but these are further adjusted by the lab to include sample variation. Current tolerances used in our lab were established in 2008.

Beginning in September 2015, we will make some adjustments to our current tolerances for complete cat and dog foods. With the implementation of a new lab software system, we will be able to set the tolerances of each product based on label moisture guarantees. Current AAFCO AVs will then be applied the profile ranges, allowing for a more equitable eval-

Table 7. Analytical variations for commercial feed samples.

Analyte	Lower AV	Upper AV	Analyte	Lower AV	Upper AV
Crude Protein	-3%	50%	Zinc	-40%	200%

Selenium	-40%	40%			

uation of the mineral content of cat and dog foods. The current system allows a wider tolerance for mineral content of wet foods than dry foods, and this will be corrected. Based on historical data, the largest impact of this change will be more violations in wet dog food for excessive calcium and phosphorus. These changes have very minimal effects on dry dog and cat foods and will not affect livestock feed or ingredients. Though the changes in mineral tolerances will need to coincide with our new lab software, we will not issue violations based on these new tolerances until January 1, 2016.

Sample Violation Report

The sample violation report for 2014 includes 3,000 official samples from 520 different manufacturers or guarantors. Overall 76 percent of samples passed (no violations on any analytes) while 95 percent of all analytes met their label guarantees. When label violations are found, manufacturers or guarantors are requested to investigate and report their findings to the feed director. When violations have the potential to harm animals or consumers, our office has the authority to withdraw the product from distribution until the problem is corrected.
