Introduction

This report presents the results of the analysis and tests of official seed samples taken by the inspection staff of the Division of Regulatory Services during the period 1999-2003.

Table 1 is a summary of the inspection of agricultural seeds during the period 1999-2003 and is organized by seedsman. It includes the total number of samples taken by the inspection staff and the number found to be mislabeled. This listing includes only those stop sale orders issued by the seed regulatory coordinator on sampled lots of seed.

Table 2 is a listing of the samples (lots) taken in 2003 that were found to be mislabeled. Samples (lots) are mislabeled when: (1) the difference between the "labeled" and "found" is greater than the tolerance permitted in the "Rules for Testing Seeds" of the Association of Official Seed Analysts; (2) the label (tag) does not contain information required by the Kentucky Seed Law and Regulations; and (3) the seed does not meet the standard established in the regulations. The rate of occurrence of noxious weed is expressed in number per pound.

Table 3 is a listing of field issued stop sales for 2003. These stop sales were issued by the inspection staff during their inspection of seed stocks at various wholesale and retail outlets throughout Kentucky. The reasons for the issue of stop sale orders on site include but are not limited to: (1) seed with expired germination test dates; (2) seed that is not labeled to contain the information required by the Kentucky Seed Law and Regulations; and (3) seed lots that have been noted to be in violation of the Kentucky Seed Law and Regulations as a result of previous official inspection and analysis and have not been relabeled or withdrawn from sale by the seedsman. It is important to note that the responsibility for maintenance of the seed test date is that of the location where the seed is offered for sale.

(This page left blank intentionally)

Table 1

Table 1 is a history of the number of regulatory samples taken (T) and the number found to be mislabeled (M) after laboratory analysis. The results are stated by year (1999, 2000, 2001, 2002, 2003) for the previous five years; the last column (1999-2003) provides the total number of samples taken and total number found to be mislabeled for the five-year period.

Table 2

Table 2 is a listing of samples taken during 2003 that were found to be mislabeled after laboratory analysis. The information provided includes the name of the seedsman responsible for the guaranteed analysis of the seed lot, the name of the dealer location where the sample was obtained, the component that was mislabeled, the stated label guarantee, and the value found to be present by laboratory analysis.

Seed lots are mislabeled when they are found to be out of tolerance of the labeled guarantees. Tolerances applied are those established in “Rules for Testing Seeds” published by the Association of Official Seed Analysts. All official Kentucky samples are tested in accordance with the methods prescribed in “Rules for Testing Seeds” as required by Regulation 12KAR 1:115, under the provisions of the Kentucky Seed Laws KRS 250.021-250.111.

Table 2 provides official laboratory analysis (found) compared to seed analysis tag guarantees (labeled). The seed lots listed are out of tolerance of the tag guarantee for the stated component and in violation for the labeling provision of the Kentucky Seed Law.

Some of the seed lots that were found to be out of tolerance for the germination component will state two values. The first value is the germination percentage and the second value is the hard seed percentage. Agricultural seed with the exception of native grasses must have a minimum germination and hard seed/dormant seed of 60 percent.

A seed lot is to be labeled as a mixture if more than one pure seed component is present in excess of 5 percent. Seed lots that have more than one pure seed component and appear as mislabeled will have at least one pure seed component that is out of tolerance and below the seed analysis tag guarantee. Other pure seed components stated in association with the seed lot may be either above or below the stated seed analysis tag guarantee, but all pure seed values stated are out of tolerance.

Seed lots found to be out of tolerance of their seed analysis tag guarantee for one or more components may be relabeled and offered for sale after a proper release from the stop sale order has been obtained. A release from a stop sale order for purposes of relabeling and offering for sale cannot be obtained for seed lots with a total germination below 60 percent for agricultural seed except native grasses, seed lots that contain excess noxious or prohibited noxious weeds, and seed lots that contain in excess of 2 percent weed seed. These lots can be released for purposes of removal from the Kentucky marketplace.

Table 3

Table 3 is a listing of seed lots found to be in violation of the Kentucky Seed Law during routine inspection of seed located in dealer and wholesale locations throughout Kentucky. All seed lots included in this listing were placed under a stop sale order and removed from the sales floor if at retail. Seed lots under a stop sale order cannot legally be offered for sale until the noted violation has been corrected and a release from the order has been obtained from the Division of Regulatory Services.

This listing details both the seedsman's name and the dealer location. Examination of the information provided will reveal that a very large majority of the noted violations involved an offer to sell expired test date seed. The retail seed dealer is responsible for the maintenance of the seed lot germination test date. The seed dealer is in violation of the provisions of the Kentucky Seed Law if the dealer offers an expired germination test date seed lot for sale.
